**Re: Lower Ley Creek Subsite of the Onondaga Lake Superfund Site –
Designation of Supervising Contractor
Our File No: C906/190933**

Dear Ms. Tames and Ms. Charney:

On behalf of the Respondents to the Administrative Order on Consent for Remedial Design for the captioned Superfund Subsite (AOC), and pursuant to paragraph 32 thereof, please be advised that the Respondents designate the following Supervising Contractor for completion of the Remedial Design:

Arcadis, U.S., Inc.
6723 Towpath Road
Syracuse, NY 13214-0066
Telephone (315) 671-9235

A statement of Arcadis' qualifications is enclosed. The company has extensive experience in the design and implementation of sediment removal projects in accordance with appropriate quality systems and plans. As such, Respondents request that Arcadis not be required to submit a formal Quality Management Plan at this time for this project. Please feel free to discuss this issue further with Respondent's Project Coordinator, Mark Gravelding, P.E.

Additionally, pursuant to paragraph 97 of the AOC, please find enclosed Certificates of Insurance Coverage for Respondent's Supervising Contractor, Arcadis U.S., Inc.

SEDIMENT AND WATERFRONT SERVICES

FEBRUARY 2016

SERVICE AREAS

Arcadis' Sediment and Waterfront Practice provides the following:

- Sediment Site Investigation and Assessment
- Risk Assessment and Ecological Science
- Sediment Site Remediation and Restoration
- Waterfront Engineering
- Modeling and Systems Analysis

Arcadis Sediment & Waterfront Services Value

A cornerstone of the Arcadis environmental practice is our broad range of sediment management and waterfront engineering capabilities. We are a leader in the field of sediment assessment and management, having directed environmental programs at more than 150 sites and completed some of the most challenging sediment management projects in the world. Our authoritative insights have contributed to and are reflected in current U.S. guidance on contaminated sediment issues.

Our strategic management of sediment issues integrates:

- Characterizing the nature and extent of chemicals of concern
- Evaluating the physical dynamics and biology of sediment deposits
- Assessing pathways of ecological and human health exposure and risk
- Developing mitigation methodologies and engineering designs
- Implementing and managing remedy construction
- Managing environmental communications to meet stakeholder expectations and relationships

Each sediment project is unique and is performed under varied environmental settings, diverse business objectives, and broad stakeholder expectations; often a wide range of capabilities is needed. Arcadis offers strategic consulting to our clients by providing experienced practitioners with broad expertise in the unique aspects of sediment, supported by subject matter experts across complementary disciplines.

Our demonstrated ability to deliver sediment solutions across the globe, drawing from the best expertise of our practice and with localized in-country support, has positioned Arcadis as the consultant of choice and trusted advisor to multinational firms faced with complex sediment-related issues.

Sediment Site Investigation and Assessment

Arcadis has conducted sediment site investigations globally, under a wide variety of environmental settings and conditions. Our sediment field teams are among the most experienced in the world, having collected more than 10,000 sediment cores and implemented numerous media-focused and chemical-specific sampling programs for surface water, aquatic and terrestrial biota, benthic organisms, sediment pore water, floodplain soils, and groundwater-surface water interface conditions. Our expertise in biological sampling includes population studies and tissue sampling for invertebrates, fish, reptiles, amphibians, birds, and small mammals.

Arcadis' sediment site assessments employ sound planning and a tiered, adaptive approach to determine the nature and extent of contaminants, assess sediment and contaminant mobility, and quantify exposures to ecological and human receptors. Our expert knowledge and skills in proper study design, sampling methods, protocols and operations, and quality assurance is critical to success. Specialized sampling is used where applicable to increase cost efficiency in delineation of extent or to achieve more direct and meaningful measurement of chemical concentrations. Our team excels in designing and conducting assessments with an uncompromising attitude toward quality assurance and control in the field, at the laboratory and through data validation, management, and analysis. This results in a thorough understanding of the site conditions, preparation of technically sound conceptual site models, and provides a robust framework to support further management decisions for optimal site solutions.

Sediment-related site assessment services provided by Arcadis include:

- Site Characterization Reports (i.e., remedial investigation)
- Conceptual Site Models
- Quality Assurance and Sampling Work Plans
- Soil, Sediment, Surface and Ground Water, Porewater, and Biota Sampling
- Specialized Sampling for Passive, Low
- Volume, and In-field Analysis
- Source Identification and Investigation
- Data Management and Interpretation, including Statistical and Geospatial Analysis
- Surface-water Systems Hydrologic and Hydrodynamic Studies
- Stream Classification, Sediment Transport, and Geomorphic Characterization
- Contaminant Fate and Transport Analysis

Risk Assessment and Ecological Science

Arcadis provides ecological sciences and risk assessment to simplify our clients' most challenging sediment-related problems. Arcadis' scientists, engineers, and environmental professionals work seamlessly to provide our clients with a world-class technical platform to develop and deploy strategic and integrated multidisciplinary solutions.

Arcadis understands the importance of incorporating an ecological sciences perspective to our engineering projects to identify, assess, and help resolve environmental, risk, and regulatory hurdles that may affect client objectives, resulting in comprehensive project resolutions. These integrated teams can better assess client needs and provide more creative, cost-effective solutions. Arcadis offers leadership in strategic development of watershed assessments for regulatory compliance and remediation planning and evaluation; ecological and human health risk assessments to inform risk-based decisions regarding the need for and extent of remediation, as well as restoration potential and performance; and development of conceptual site models that integrate surface water, sediment, groundwater, and uplands. Our experts keep apprised of the latest regulatory changes in the field of environmental sciences and risk assessment to inform clients well in advance and help develop a strategy to most effectively navigate the change. Whether the challenge is associated with development, operations, and/or legacy liabilities, or Natural Resource Damage claims, Arcadis' ecological and risk knowledge will support the development and implementation of a more balanced solution to sediment-related challenges.

Arcadis' comprehensive ecological sciences and risk assessment services include:

- Human Health and Ecological Risk Assessment
- Toxicology/Bioavailability and Toxicity Testing
- Ecosystem Restoration Design, Planning, and Implementation
- Habitat Assessment and Characterization
- Habitat Modeling
- Natural Resource Damage Assessment (NRDA)
- Endangered Species Act Compliance/Biological Assessment
- Population and Endangered Species Modeling
- Cultural and Paleontology Resources/National Historic Preservation Act Compliance
- Mitigation Planning and Negotiation
- Wetland and Waters Delineation
- Environmental Statistics
- Fish Passage Assessment
- Biological Monitoring

Sediment Site Remediation and Restoration

Arcadis' sediment remediation capabilities in evaluating, designing, and implementing traditional and innovative remedial technologies underpin our numerous successful sediment remediation projects. Our staff conducts feasibility studies and alternatives analyses, and designs and performs bench- and pilot-scale treatability studies to develop and design effective final remedies and restoration projects. Arcadis also implements full-scale remedial programs, serving as the contractor or construction manager.

Our sediment management expertise allows us to manage the entire process from strategic planning, development of remediation agreements, and community relations to design, construction, and long-term operation, maintenance, and monitoring, if needed. To deliver complete sediment solutions, our teams include specialists in remedial options and treatment technologies, construction management, geotechnical and structural engineering, permitting, drafting/data visualization, data management, and public communications outreach, enabling us to provide turnkey services or any portion of a remedial program. We are a leader in sediment remediation and habitat restoration projects, with more than 25 years of experience working on major lakes, rivers, harbors, and waterways around the world.

Arcadis' deep experience in the engineering design and construction management of sediment projects is the true differentiator that puts us a step ahead of our competition. The origin of our construction management practice is founded on nearly three decades of work on sediment remediation projects, which allows us to provide constructability reviews and value engineering that can significantly reduce cost and financial risks during final remedy implementation.

Arcadis' contaminated sediment site remediation and restoration services include:

- Comprehensive Site Strategy Development
- Regulatory Negotiation, Compliance, and Permitting
- Feasibility Studies and Design Reports
- Source Control
- Remedy Design:
 - ~ Environmental and Navigational Dredging
 - ~ Dredging Management
 - ~ Confined Disposal Facilities
 - ~ Sediment Capping
 - ~ Monitored Natural Recovery
 - ~ Sediment Ex-situ Treatment
 - ~ Off-site Transport and Disposal
- Design Build and Other Alternative Project Delivery Methods
- Construction Management, Quality
- Assurance, and Oversight
- Aquatic and Terrestrial Habitat Restoration
- Channel Stabilization and Natural Channel Design
- Remedy Monitoring

Waterfront Engineering

Sediment issues can be particularly significant and complex at industrial waterfronts and port harbors and often bring shoreline geotechnical or structure concerns. Arcadis' global reputation for providing waterfront infrastructure and environmental services to coastal port authorities and waterfront industries complements our sediment-related expertise. Arcadis' integrated team of scientists, engineers, and technicians provides the expertise required to develop holistic solutions for a multitude of port and waterfront engineering and construction management needs.

Our collective capabilities and competencies give us the capacity to deliver scientifically sound analysis, creative engineering, and world-class environmental and infrastructure services needed to plan, develop, and execute sediment-related projects along the waterfront. Arcadis provides planning, engineering, modeling, and cost-estimation for all aspects of waterfront sediment management projects. Arcadis has upwards of 30 years' experience in the evaluation and design of dredge material management projects, with a specialization in designing for beneficial use, such as wetland habitat creation projects. We draw upon our knowledge in sediment site investigation and computational modeling to assist clients in understanding challenging scour and shoaling issues at their sites. Work in the port and waterfront environs – whether designing a remedial approach, deepening a channel, or improving shore-side infrastructure – requires solid geotechnical engineering, which Arcadis can provide. Our vast experience at upland and in-water remediation sites gives us the knowledge and skills to effectively manage contaminated sediment at ports and harbors, which demand careful attention to complex regulatory issues, sensitivity to high-profile community concerns, and a focus on cost-efficiency. Many ports are located in environmentally sensitive areas; therefore, Arcadis provides clients with the ability to integrate habitat protection and restoration into infrastructure development or remedial designs, and other critical components of their environmental programs.

Waterfront engineering and construction management services include:

- Navigational Dredging and Dredging Design
- Permitting and Compliance
- Dredged Material Management
- Confined Disposal Facility (CDF) Engineering
- Geotechnical Engineering
- Design of Bulkheads and Other Retaining Structures
- Marine Construction Management
- Design of Erosion Control and Shoreline Protection Structures
- Environmental Impact Assessment
- Habitat Restoration and Wetlands Management
- Stormwater Management
- Pollution Source Control
- Construction Oversight and Quality Assurance

Modeling and Systems Analysis

The Arcadis surface-water systems modeling team combines the multidisciplinary skills and experience of professional engineers and environmental scientists to provide expert modeling services to our clients. Arcadis' expertise covers a wide range of modeling applications, from basic coastal and riverine hydraulics to multidimensional integrated hydrodynamic and contaminant fate and transport models.

We apply the most appropriate model for each problem and tailor our team to support each effort. We recognize that models can be essential but require expert knowledge in defining the value and reliability of models for natural and engineered systems and are not in themselves sufficient to address engineering, management, and analysis needs. Therefore, our team is inter-disciplinary, with knowledgeable specialists in practice areas including coastal and ocean hydrodynamics, river hydrodynamics, floodplain processes, water quality processes for conventional contaminants, and sediment transport and fate processes for sediment-related contaminants. Our team of recognized experts is experienced in applying a wide variety of modeling platforms, knowledgeable in the interpretation of model results for causal analysis or predictive simulations to support site management and engineering decision-making, and accomplished in the communication of modeling studies to experts and the public.

Arcadis' modeling services include:

- Hydrologic and Hydrodynamic Riverine Modeling
- Sediment Transport Analysis
- Contaminant Fate and Transport Prediction
- Remediation Alternatives Analysis
- River and Coastal Scour Evaluation
- Coastal Storm Surge Analysis
- Coastal Structures Analysis
- Discharge Permitting
- Spill Event Simulation and Cause-Effect Analysis
- Lake and Reservoir Quality Management
- Flood Analysis and Floodplain Investigations
- Aquatic Construction Permitting

Arcadis is the leading global natural and built asset design and consultancy firm working in partnership with our clients to deliver exceptional and sustainable outcomes through the application of design, consultancy, engineering, project, and management services.

Arcadis is differentiated by our talented and passionate people and our unique combination of capabilities covering the whole asset life cycle, our deep market sector insights, and our ability to integrate health & safety and sustainability into the design and delivery of solutions across the globe.

We support UN-Habitat with knowledge and expertise to improve the quality of life in rapidly growing cities around the world.

Neither the Company's right to make inspections, sample, and monitor, nor the actual undertaking thereof nor any report thereon, shall constitute an undertaking, on behalf of the Insured or others, to determine or warrant that property or operations are safe, healthful or conform to acceptable engineering practice or are in compliance with any law, rule, or regulation.

L. SOLE AGENT

The Named Insured first listed in Item 1 of the Declarations shall act on behalf of all other Insureds, if any, for the payment or return of premium, receipt and acceptance of any endorsement issued to form a part of this Policy, and giving and receiving notice of cancellation or nonrenewal.

M. ASSIGNMENT

This Policy shall not be assigned without the prior written consent of the Company. Assignment of interest under this Policy shall not bind the Company until its consent is endorsed onto this Policy.

N. SUBROGATION

If there is a payment made by the Company, the Company shall be subrogated to all the Insured's rights of recovery against any person or organization. The Insured shall cooperate with the Company and do whatever is necessary to secure these rights. The Insured shall do nothing after a claim to waive or prejudice such rights. The Company agrees to waive this right of subrogation against the client of the Insured or other parties to the extent that the Insured had, prior to Claim, a written agreement to waive such rights.

O. CHANGES

Notice to any agent or knowledge possessed by any agent or by any other person shall not effect a waiver or a change in any part of this Policy or estop the Company from asserting any right under the terms of this Policy; nor shall the terms of this Policy be waived or changed, except by endorsement issued to form a part of this Policy.

P. CANCELLATION

This Policy is non-cancellable by either the Named Insured or the Company, except the Company can cancel this Policy for non-payment of premium. In the event the Company does cancel this Policy for non-payment of premium, the Named Insured shall be entitled to ten (10) days written notice of cancellation from the Company, at the address last known to the Company.

If the Company cancels, earned premium shall be computed pro-rata.

Proof of mailing of any notice of cancellation shall be sufficient proof of notice. The effective date of cancellation terminates the Policy Period. Return of unearned premium is not a condition of cancellation. Unearned premium shall be returned by the Company as soon as practicable.

Q. ARBITRATION
